1. Jira board – shows the status of our issues in sprint 1

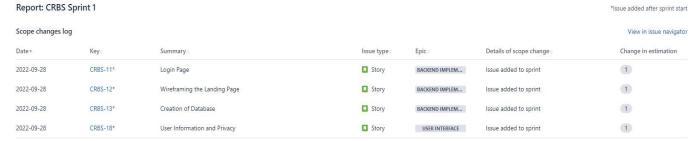

2. List of backlogs for every sprint – it contains deliverables per sprint. Each story may have multiple child issues.

3. Sprint burndown chart

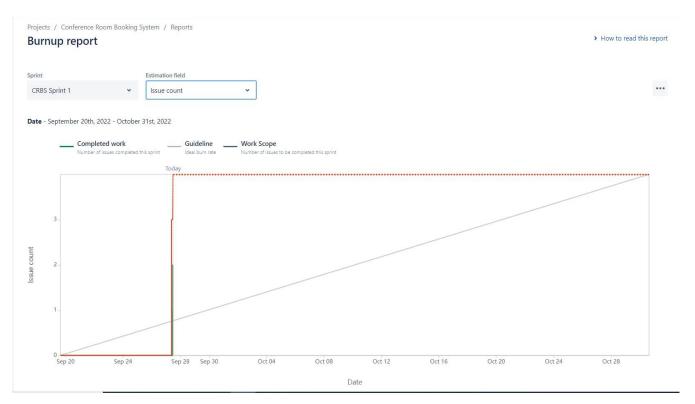

Your sprint commitment has increased by 4 issues

Due to scope changes: You have 4 issues to complete this sprint

Incomplete issu	ies					View in issue navigator
Key:	Summary :	Issue type	Epic :	Status	Assignee :	Issue count
CRBS-13	Creation of Database	Story	BACKEND IMPLEM	IN PROGRESS	SH	1
CRBS-18	User Information and Privacy	Story	USER INTERFACE	IN PROGRESS	RR	1
Completed issue	es					View in issue navigator
Key :	Summary :	Issue type :	Epic	Status	Assignee :	Issue count
CRBS-11	Login Page	Story	BACKEND IMPLEM	DONE	RS	1

#### COCOMO MODEL

COCOMO – Constructive Cost Model It is a popularly used software cost estimation model which predicts the efforts required for the project, total project cost and scheduled time for the project in terms of effort. It estimates the required number of Man Months for full development of software products.

Based on this analysis with the help of following formulae:

Effort (E) = 
$$a*(KLOC)^b$$
 MM  
Scheduled Time (D) =  $c*(E)^d$  Months(M)

### Where,

- E = Total effort required for the project in Man-Months (MM).
- D = Total time required for project development in Months (M).
- KLOC = the size of the code for the project in Kilo lines of code.
- a, b, c, d = The constant parameters for a software project.

PROJECT TYPE	а	b	с	d
Organic	2.4	1.05	2.5	0.38
Semidetached	3	1.12	2.5	0.35
Embedded	3.6	1.2	2.5	0.32

With the help of analysis, we can conclude that our model has the following classifications:

MODEL TYPE – Basic

MODEL CLASS – Organic

Based on our analysis the estimate of the total lines of code is 1000 lines of code.

#### **CALCULATION:**

$$E = 2.4 * (1)^{1.05}$$

### E = 2.4 PPM

$$D = 2.5 * (2.4)^{0.38}$$

$$D = 3.4865 PPM$$

$$P = E / D$$

$$P = 0.6883$$
